This presentation provides a general overview of some aspects of your personal financial position. It is designed to provide educational and / or general information and is not intended to provide specific legal, accounting, investment, tax or other professional advice. For specific advice on these aspects of your overall financial plan, consult with your professional advisors. Asset or portfolio earnings and / or returns shown, or used in the presentation, are not intended to predict nor guarantee the actual results of any investment products or particular investment style.

IMPORTANT: The illustrations, projections or other information in this report regarding the likelihood of various investment outcomes are hypothetical in nature, and do not reflect actual investment results and are not guarantees of future results. Additionally, it is important to note that information in this report is based upon financial figures input on the date above; results provided may vary with subsequent uses and over time.

Information About Your Personalized Financial Plan

We appreciate that you have questions and concerns as you work to attain and preserve financial security. Today's financial environment is complex and in many regards, uncertain. The decisions you make regarding work, spending, investment, and retirement, both now and in the future, will significantly affect your financial condition over the long term.

In an effort to aid you in learning, understanding, and formulating a personal basis for decision making, this 'Personalized Financial Plan' is offered to help enhance your knowledge of various topics and communicate some of the intricacies of the financial world. The plan represents a framework to clarify and structure your financial matters.

This plan is based upon confidential information you provided regarding your present resources and objectives. While illustrations within this plan can be a valuable aid in the examination of your finances, it does not represent the culmination of your planning efforts. Financial planning is an ongoing process.

This hypothetical illustration of mathematical principals is custom made to model some potential situations and transitions you may face in your financial future. Hypothetical assumptions used in this illustration are specifically chosen to communicate and demonstrate your current financial position and highlight for discussion with your advisor the complex future interacting effects of combined incomes, expenses, savings, asset growth, taxes, retirement benefits, and insurance.

This document is not an advertisement or solicitation for any specific investment, investment strategy, or service. No recommendations or projections of specific investments or investment strategies are made or implied. Any illustrations of asset growth contained herein are strictly used to demonstrate mathematical concepts and relationships while presenting a balanced and complete picture of certain financial principles. Growth assumptions are applied to generalized accounts based upon differing tax treatment. Illustrations, charts and tables do not predict or project actual future investment performance, or imply that any past performance will recur.

This plan does not provide tax or legal advice, but may illustrate some tax rules or effects and mention potential legal options for educational purposes. Information contained herein is not a substitute for consultation with a competent legal professional or tax advisor and should only be used in conjunction with his or her advice.

The results shown in this illustration are not guarantees of, or projections of future performance. Results shown are for illustrative purposes only. This presentation contains forward-looking statements and there can be no guarantees that the views and opinions expressed will come to pass. Historical data shown represents past performance and does not imply or guarantee comparable future results. Information and statistical data contained herein have been obtained from sources believed to be reliable but in no way are guaranteed as to accuracy or completeness.

On page 3, Assumptions, is information provided by you and used throughout the presentation. Please review the information for accuracy and notify your Financial Advisor promptly if discrepancies in the assumptions are present; discrepancies may materially alter the presentation.

Your actual future investment returns, tax levels and inflation are unknown. This illustration uses representative assumptions in a financial planning calculation model to generate a report for education and discussion purposes. Do not rely upon the results of this report to predict actual future investment performance, market conditions, tax effects or inflation rates.

Summary

This report uses financial models to present a picture of your current financial situation and illustrations of possible directions your finances may take. Future economic and market conditions are unknown, and will change. The assumptions used are representative of economic and market conditions that could occur, and are designed to promote a discussion of appropriate actions that may need to be taken, now or in the future, to help you manage and maintain your financial situation under changeable conditions.

Your Current Situation:

- You have assets of approximately \$1,586,700
- You have liabilities of approximately \$172,500
- Your net worth is approximately \$1,414,200
- You now have \$935,000 in working assets and are adding \$29,000 per year.

Your Goals:

- Anthony wants to retire at age 65 and Michelle wants to retire at age 65.
- Monthly after-tax income needed at that time is \$5,000 (in today's dollars).
- You will need the income until the last life expectancy of age 90.

Planning Details:

- Asset Allocation: Type of Investor - Moderate
- Long-term care assets at risk - \$228,368
- Net Estimated Life Insurance Needs Shortage for Anthony: None
- Net Estimated Life Insurance Needs Shortage for Michelle: None
- Anthony and Michelle both have wills.
- Anthony and Michelle both have Durable General Powers of Attorney.
- Anthony and Michelle both have Living Wills.
- Anthony and Michelle both have Healthcare Powers of Attorney.

Retirement Analysis

Using the information you provided, calculations have been made to estimate whether your current retirement program will meet your stated retirement goals. The analysis begins now and extends through life expectancy. It includes tax advantaged, taxable investments, defined benefit pensions, if applicable, and Social Security benefits. The analysis calculates growth and depletion of capital assets over time. This analysis is the basis for the following summarized statement.

Actions:

Based on the assumptions, it appears that you will reach your retirement goals. We recommend that you continue to monitor your retirement plan. Changes in the assumptions may have a significant impact on the success of this plan.

This report is for informational and educational purposes only. The information and assumptions used are estimates. The resulting calculations are designed to help illustrate financial concepts and general trends.

Assumptions

Client Information:	3/20/06	Asset Allocation:	Current	Suggested
Names : Mr. & Mrs. Sample		Cash & Reserves	0.00%	15.00%

Total cost at 6% inf.

Expenses & Inflation (Annual After-tax):

Expenses, (pre ret.)	\$70,000
Expenses, Survivor (pre ret.)	\$55,000
Expenses at Retirement	\$60,000
Expenses, Survivor (ret.)	\$50,000
Inflation, (pre ret.)	3.00%
Inflation, Survivor(pre ret.)	3.00%
Inflation at Retirement	3.00%
Inflation, Survivor (ret.)	3.00%

Other Expenses After-tax :

Note: These assumptions are based upon information provided by you, combined with representative forward looking values intended to provide a reasonable financial plan illustration for education and discussion purposes. The investment returns, tax rates, benefit increase rates, inflation rates, and future expense values used in this report were selected based on your age, assets, income, goals and other information you provided. These assumptions do not presuppose or analyze any particular investments or investment strategy, or represent a guarantee of future results.

This report, and its hypothetical illustrations, are intended to form a basis for further discussion with your legal, accounting, and financial advisors. Actual future investment returns, taxes and inflation are unknown. Do not rely upon this report to predict future investment performance.

Net Worth Statement

Mr. & Mrs. Sample

March 20, 2006

ASSETS

Savings and Investments

Bond Mutual Funds	\$279,000	
		\$279,000

Retirement Accounts

Qualified Plans-Anthony	\$425,000	
IRA Assets-Michelle	145,000	
Roth IRA Assets-Michelle	86,000	
		\$656,000

Other Assets

Residence	\$535,000	
Personal property	35,000	
Life insurance cash values	5,700	
Autos	40,000	
Other Asset	36,000	
		\$651,700

TOTAL ASSETS		\$1,586,700
---------------------	--	--------------------

LIABILITIES

Residence mortgage	\$125,000	
Auto Loans	22,000	
Credit Cards	3,500	
Other Debt	22,000	
		\$172,500

NET WORTH (Assets less Liabilities)		\$1,414,200
--	--	--------------------

Note: Potential taxes due on unrealized gains or assets in tax-deferred retirement plans are not accounted for in this Net Worth Statement.

Asset Worksheet

Description	Current Amount	Annual Additions	Addition Period	Asset Class	Account Taxation	Asset Type
401(k) Employer	425,000	14,000	2006-2015	Growth	Tax-Deferred (1)	Mutual funds (stock)
Vanguard	175,000	12,000	2006-2015	Inc/Growth	Taxable (1)	Bond mutual funds
Fidelity	104,000			Income	Annuity (J)	Bond mutual funds
Fidelity	86,000	3,000	2006-2015	Aggressive	Roth IRA (2)	Mutual funds (stock)
Schwab	145,000			Inc/Growth	IRA (2)	Bond mutual funds
Totals:	\$935,000					

Asset Allocation

Developing An Asset Allocation

Asset allocation refers to maintaining your investments in strategic asset classes, such as Cash, Fixed Income, and Equities, in an advantageous manner over time to ensure adequate diversification. It is important to the success of your planning that your asset allocation be consistent with your goals.

[Here is a summary of your current asset allocation.](#)

<u>Personal Investments</u>	Current Balances	Cash & Equivalents	Income Assets	Growth Assets	Other Assets*
Bond Mutual Funds	\$279,000		\$104,000	\$175,000	
	\$279,000		\$104,000	\$175,000	
<u>Retirement Plans</u>					
Qualified Plans-Anthony	\$425,000			\$425,000	
IRA Assets-Michelle	145,000			145,000	
Roth IRA Assets-Michelle	86,000			86,000	
	\$656,000			\$656,000	
Total Investment Assets	\$935,000		\$104,000	\$831,000	

<div style="display: flex; justify-content: space-around; font-weight: bold; color: red;"> 11% 89% </div> <p style="text-align: center; color: red; font-weight: bold; margin-top: 5px;">Current Asset Allocation</p>

* Other assets are not included in the Current Asset Allocation.

Your Current Asset Allocation

The information from the previous page was used to create the following chart.

It is important to the success of your planning that your asset allocation is consistent with your goals. You should compare your current allocation to the Suggested Asset Allocation below which may be more appropriate and beneficial to your situation.

Suggested Asset Allocation (Total Return)

Based upon information you provided, we believe you should consider a total return-oriented investment mix. This allocation has averaged an approximate 8% historical annual return. We have illustrated a broad-based allocation. Effectiveness could be further increased by a blend of large, small, and international stocks within the Equities category. See your Financial Advisor for further analysis.

	Asset Allocation				Change
	Current		Suggested *		
Cash & Reserves	\$0	0%	\$140,250 **	15%	\$140,250
Income	104,000	11%	93,500	10%	(10,500)
Income & Growth	320,000	34%	187,000	20%	(133,000)
Growth	425,000	46%	280,500	30%	(144,500)
Aggressive Growth	86,000	9%	233,750	25%	147,750
Other	0	0%	0	0%	0
Total	\$935,000	100%	\$935,000	100%	\$0

* These suggested asset allocation percentages are representative portfolio target values.

** Does not include any provision for an Emergency Fund.

Note: Asset Allocation does not guarantee a profit or protect against loss in declining markets.

This report, and its hypothetical illustrations, are intended to form a basis for further discussion with your legal, accounting, and financial advisors. Actual future investment returns, taxes and inflation are unknown. Do not rely upon this report to predict future investment performance.

Retirement Profile

Developing A Retirement Plan

Developing a retirement plan means understanding your current situation, deciding among alternatives, and taking appropriate action today. *This report will help you define your current retirement goals, identify your current planning, and estimate the results for your review.*

Your Current Retirement Goals

	<u>Anthony</u>	<u>Michelle</u>
Age:	58	54
Retirement Age:	65	65
Years until Retirement:	7	11
Years of Retirement:	20	25
Annual Retirement Spending (After-tax):	\$60,000	<i>(expressed in today's dollars)</i>

Assumptions

	<u>Pre-Retirement</u>	<u>Retirement</u>
Inflation Rate:	3.0%	3.0%
Income Tax Rate (Average):	20.0%	18.0%
Return on Investments (Average):	7.0%	7.0%

Current residence(s) will be maintained. Related debt will be paid per existing mortgage(s).

Resources Available for Retirement

Funds to meet your goals can come from several sources: Personal Investments, Retirement Plans, Defined Benefit Pensions, Social Security, and Other Income.

Here is a summary of your situation.

<u>Personal Investments</u>	<u>Current Balances</u>
Bond Mutual Funds	\$279,000
	\$279,000
<u>Retirement Plans</u>	
Qualified Plans-Anthony	\$425,000
IRA Assets-Michelle	145,000
Roth IRA Assets-Michelle	86,000
	\$656,000
Total Investment Assets	\$935,000

* See Asset Worksheet for detailed annual savings information.

<u>Social Security</u>	<u>Anthony</u>	<u>Michelle</u>
Starting Age	65	65
Benefit at Starting Age (After-tax)	\$19,954	\$16,556
<u>Pension Plans</u>	<u>Anthony</u>	<u>Michelle</u>
Pension Amount per Year (After-tax)	\$29,520	\$18,040
Pension Starting Age	65	65
Increase Rate Pre-Retirement	1.0%	1.0%
Increase Rate in Retirement	1.0%	1.0%
Survivor Percentage	50%	50%

Retirement Summary

Retirement Capital Illustration

The analysis begins at your current age and extends through your life expectancy. It includes all assets, both tax advantaged and taxable, all expenses, including education funding if applicable, other income and expense estimates, defined benefit pensions, and Social Security benefits. The graph illustrates the growth and depletion of your capital assets, and in cases of capital shortages shows accumulating deficits.

General Assumptions:

Rates of Return Before and After Retirement Used in Illustration:		
Taxable RORs:	7%	7%
Tax Def. RORs:	7%	7%
Tax Free RORs:	4%	4%
Annuity RORs:	7%	7%

Retirement Spending Needs*	\$60,000
Survivor Spending Needs*	\$50,000
Retirement Age	Anthony - 65
Retirement Age	Michelle - 65
Inflation - Current	3%
Inflation - Retirement	3%
Tax Rate - Current	20%
Tax Rate - Retirement	18%

* Spending needs are stated in today's after tax-dollars. See Assumptions page for complete listing of assumptions.

Actual future returns, taxes, expenses, and benefits are unknown. This illustration uses representative estimates and assumptions for educational and discussion purposes only. Do not rely on this report for investment analysis.

Retirement Capital Illustration Results:

Using current data, estimates show you will have enough money to reach your retirement goals. Since it appears that you will have \$11,765,000 left at your life expectancy (not including insurance proceeds), you may wish to consider: an earlier retirement, increased spending during retirement, or other ways to enhance your retirement years.

Monte Carlo Simulation Explanation

The financial planning process can help you evaluate your status in relationship to your financial goals and objectives. In preparing a hypothetical financial illustration for discussion, a series of representative fixed assumptions are made, such as inflation rates, rates of return, retirement benefits and tax rates. While such static hypothetical illustrations are still useful for education and discussion purposes, they are based upon unchanging long-term assumptions. In fact, economic and financial environments are unpredictable and constantly changing.

Monte Carlo Simulation is one way to visualize the effect of unpredictable financial market volatility on your retirement plan. Monte Carlo Simulation introduces random uncertainty into the annual assumptions of a retirement capital illustration model, and then runs the model a large number of times. Observing results from all these changing results can offer a view of trends, patterns and potential ranges of future outcomes illustrated by the randomly changing simulation conditions. While Monte Carlo Simulation cannot and does not predict your financial future, it may help illustrate for you some of the many different possible hypothetical outcomes.

Monte Carlo Simulation Technique

Based upon the assumed portfolio rates of return used in your hypothetical financial plan, the simulation process uses a different random rate of return for each year of a new hypothetical financial plan. Five thousand full financial plan calculations are performed utilizing the volatile annual rates of return. The result is five thousand new hypothetical financial plan results illustrating possible future financial market environments.

By using random rates from a statistically appropriate collection of annual returns, and repeating the process thousands of times, the resulting collection can be viewed as a representative set of potential future results. The tendencies within the group of Monte Carlo Simulation results; the highs, lows and averages, offer insight into potential plan performance which may occur under various combinations of broad market conditions.

Note: No investment products, investment strategy or particular investment style is projected or illustrated by this process. Simulation results demonstrate effects of volatility on rate of return assumptions for education and discussion purposes only.

Standard Deviation

The simulated level of volatility in future financial markets is represented by a Standard Deviation value. This statistical measure of variation is used within the Monte Carlo Simulation to indicate how dramatically return rates can change year by year. The Standard Deviation controls the magnitude of the random changes in each annual rate of return as it is varied each year above or below the average annual rate to simulate market volatility.

The simulation model uses a Standard Deviation based upon the rate of return assumptions used in the Retirement Capital Illustration, and limits the rate of return variation to plus or minus five standard deviations in any year. Low assumed return rates generate low Standard Deviation values, higher returns relate to higher Standard Deviations.

The Bold Line

The bold line in the Monte Carlo Simulation Results graph tracks the value of assets over the length of the illustration if all rates of return are held stable at the assumed rates of return (see Assumptions). The estimate uses annual expected portfolio rates of return and inflation rates to model the growth and use of assets as indicated under Assumptions (page 3). The bold line represents the values shown in the Retirement Capital Illustration.

Percentage of Monte Carlo Results Above Zero at Selected Ages

These results represent the percentage of Monte Carlo Simulation outcomes that show positive retirement asset value remaining at different ages. A percentage above 70 at last life expectancy is an indication that the underlying retirement plan offers a substantial probability of success even under volatile market conditions. Additional ages shown give the percentage of simulation outcomes with positive asset amounts at various ages.

Monte Carlo Simulation Minimum, Average and Maximum Dollar Results

These values indicate the best, worst and average dollar results at the end of the five thousand Monte Carlo Simulations. These show the range of results (high and low), and the average of all Monte Carlo results. All values are based on results at the life expectancy of the last to die.

IMPORTANT: The projections or other information generated by the Personalized Financial Plan regarding the likelihood of various investment outcomes are hypothetical in nature, do not reflect actual investment results and are not guarantees of future results. Each Monte Carlo Simulation is unique, results vary with each use and over time.

Monte Carlo Retirement Simulation

This Monte Carlo Retirement Simulation illustrates possible variations in growth and/or depletion of retirement capital under unpredictable future conditions. The simulation introduces uncertainty by fluctuating annual rates of returns on assets. The graph and related calculations do not presuppose or analyze any particular investment or investment strategy. This long term hypothetical model is used to help show potential effects of broad market volatility and possible effect on your financial plans. This is not a projection, but an illustration of uncertainty.

The simulations begin in the current year and model potential asset level changes over time. Included are all capital assets, both tax advantaged and taxable, all expenses, including education funding if applicable, pension benefits, and Social Security benefits. Observing results from this large number of simulations may offer insight into the shape, trends, and potential range of future retirement plan outcomes under volatile market conditions.

Retirement Capital Illustration Results, at Life Expectancy, of 5000 Monte Carlo Simulations:

Percent with funds at last life expectancy	100%	Retirement Capital Estimate	\$11,765,809
Percent with funds at age 85	100%	Minimum (Worst case) result:	\$2,656,754
Percent with funds at age 75	100%	Average Monte Carlo result:	\$11,806,054
Percent with funds at age 65	100%	Maximum Monte Carlo result:	\$50,166,753

Life insurance proceeds are not included in the final year balances of these calculations.

Illustration based on an average rate of return of 7% with a std. dev. of 7% (95% of values fall between -7% and 21%).

IMPORTANT: The projections or other information generated in this report regarding the likelihood of various investment outcomes are hypothetical in nature, do not reflect actual investment results and are not guarantees of future results. Results may vary with each report and over time. Results of this simulation are neither guarantees nor projections of future performance. Information is for illustrative purposes only. Do not rely upon the results of this report to predict actual future performance of any investment or investment strategy.

Retirement Expense Forecast

The Retirement Expense Forecast graph combines estimated Social Security benefits with defined pension benefits plotted with estimated annual living expenses in retirement. The graph begins at retirement age and continues to life expectancy. Future retirement expenses are estimated based on your objectives, adjusted for inflation over time. Survivor expense levels start the year after first life expectancy.

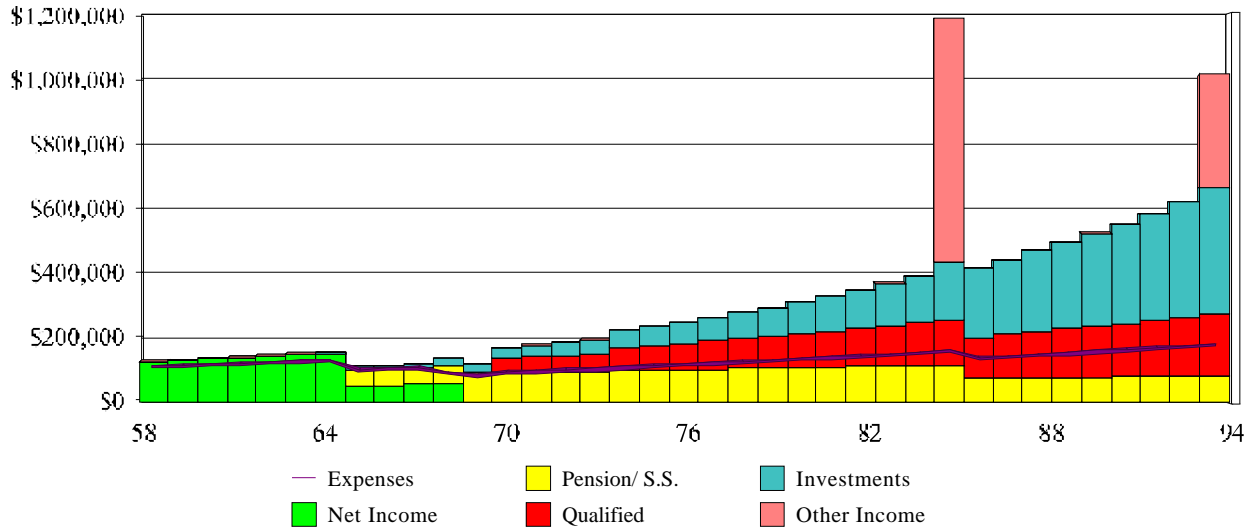

Social Security benefits, and annual adjustments for benefit growth, are estimated and illustrated over the anticipated lifetime. If the starting age selected for Social Security benefits is prior to normal benefit age, only a partial Social Security benefit may be available. Benefit amounts may decrease upon first death.

The Pension Benefit estimate combines any pension benefits and plots them starting at the age the benefit begins. At the death of the pension holder a surviving spouse might receive no continuing benefit, or only a portion of the benefit, causing a decrease in overall annual income.

Excess Expenses shown in the graph represent the amount of inflation adjusted annual living expenses that exceed the combined estimated Social Security and pension benefits. These are estimated amounts which will need to come from retirement savings to fund future expenses not covered by expected benefit income.

Note: Social Security and Pension benefit estimates are based upon information you provided. Estimates are not guarantees of future benefits amounts. Clients should not rely upon results of this report to predict actual future benefit amounts.

Cash Flow Summary

The bars in the above graph represent the amounts available from:

- Earned income (wages and self-employment net of investment)
- Social security
- Qualified plan additions and distributions
- Investment additions and distributions
- Misc - (inheritances, sale of residence, retirement account minimum distributions, life insurance)

The line illustrates the annual expenses including:

- Personal living expenses
- Planned debt expenses
- Specified special expenses and education expenses
- Planned deposits to investment and retirement accounts
- Miscellaneous expense items
- Taxes

Note: The Cash Flow report provides the actual numbers that create the preceding Cash Flow Summary graph.

Cash Flow

Ages Indv. 1 2		Cash Flow Sources					Total Sources	Less Living Expense & Taxes	Shortage or Surplus
		Earned Income	Retire/Roth Accounts*	Investment Accounts*	Pension/ Soc. Sec.	Other Income			
58	54	\$127,000	(\$17,000)	(\$1,864)			\$108,135	(\$92,600)	\$15,535

* Scheduled distributions, interest, or dividends taken in cash or amounts taken to meet the IRS minimum distribution requirements.
 Note: Earned Income is reduced by qualified retirement account contributions in calculating the effect of income taxes. Pension, Social Security, and Other Income cash flow items are net of income taxes. The tax rate used is the average tax rate entered in the input.

Cash Flow Explanation

Cash flows are sources and uses of money. Primary sources of funds are income from work, Social Security, pensions, savings, insurance proceeds, and other income events. Regular living expenses, education costs, and other planned expenses are the primary use of funds.

The cash flow report pages are designed to be an alternate presentation of the financial information shown elsewhere in this report. The emphasis of the cash flow illustrations are the amounts and types of incomes and levels of expenses that occur during the illustration.

The Cash Flow Summary Graph illustrates four primary financial elements; income, investment, expenses, and cash sources. The different colored bars in the graph represent the level of cash flows that are occurring, and what accounts they are related to. The single solid line represents the annual expense level from now to the end of the illustration. Prior to retirement, bars above the expense level represent investments.

Portions of bars below the expense line represent sources of cash that are being used to pay for planned living expenses and to cover special expenses such as education. During the working years, income from employment is generally the primary source of cash to cover expenses. In retirement, social security, pension benefits, and cash withdrawn from investment accounts are the major sources of cash to cover expenses.

In general terms, the best case is to have the cash flow bars always at or above the expense line. This indicates that there is sufficient income, or investment asset sources, to meet living expenses and other planned needs. Gaps between the expense line and cash flow bars indicate calculated shortfalls of cash flow during those years.

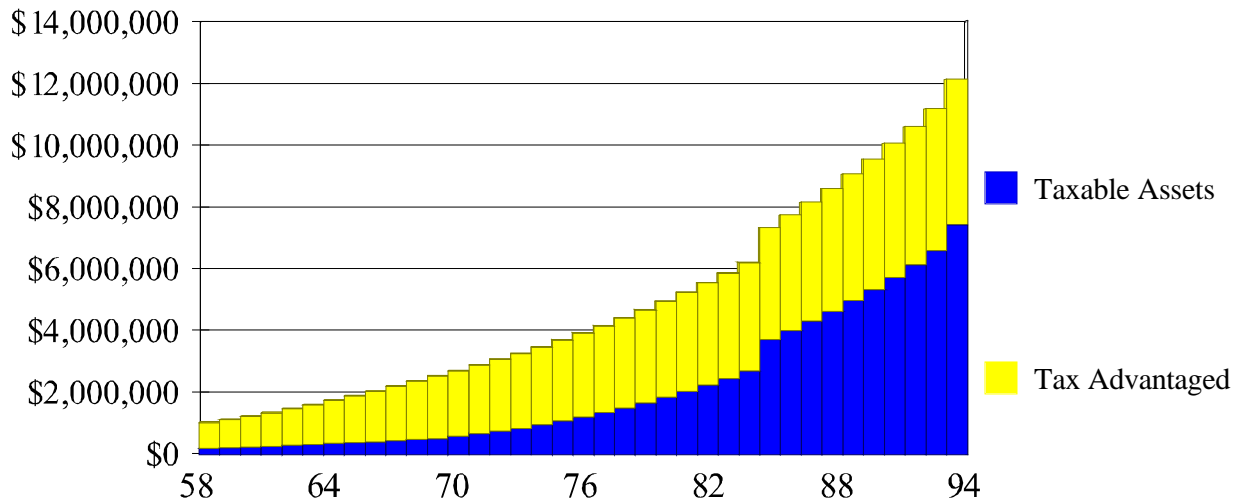

The cash flow numbers page contains the numerical information upon which the graph is based. This page shows the sources and uses of funds. The columns coincide with the bars and lines in the cash flow graph. Red numbers represent a use of cash, black a source.

The red numbers in the Retire/Roth or Investment Accounts columns are additions made to those accounts; these are investments and uses of funds. The black numbers in those columns represent withdrawals from the account; these are sources of funds to meet retirement needs.

All sources (and investment uses) are subtotaled in the Total Sources column. Tax estimates are based on earned income and investment income (adjusted for contributions to qualified retirement accounts) multiplied by the estimated net effective tax rates. The resulting tax estimate is added to inflation adjusted living expenses to create an estimated annual figure.

The combination of Total Sources and Living Expenses & Taxes can create a surplus or shortage. A shortage indicates that expenses exceed incomes and sources. A surplus can indicate that incomes exceed expenses. During retirement, if money is withdrawn at the same level of need, no surplus or shortage will occur.

Total Capital Assets

The Total Capital Assets graph displays taxable assets, combined with the value of the tax advantaged assets over time. The illustration shows assets from current age through life expectancy. Estimated capital growth is based on the rate of return for the assets, plus any annual additions or expenses. When the taxable accounts have been consumed, tax-advantaged accounts may be drawn on for additional funds.

Generally, the IRS requires that by age 70 1/2, minimum distributions must be made from qualified tax-deferred accounts. These annual distributions must be made on a schedule calculated to consume the account balances during the life expectancy. Money distributed from these tax-deferred accounts will first be used to meet current spending needs. Excess funds will be reinvested into taxable accounts.

Survivor Needs Analysis

Mr. & Mrs. Sample

In the event of an untimely death, survivors may be left without the household income needed to sustain their existing lifestyle. Life insurance coverage is recommended in an amount that will ensure sufficient ongoing income, as well as cover immediate needs, such as final expenses.

Determining proper levels of life insurance involves a comparison of current and future household expense levels with expected surviving spouse's earnings plus survivor benefits. Other resources are also taken into account such as: liquid assets, investments, pension, and retirement accounts.

Insurance needs estimates are the calculated lump sum amounts which would provide a source of future cash flow to supplement the anticipated household income. The insurance levels suggested are just general guides and may not include all factors affecting your own situation.

Spending needs for this report are based upon \$55,000 per year, inflated at 3% each year until retirement and \$50,000 per year, inflated at 3% each year during retirement.

Life Insurance Basic Needs Estimate on Anthony:

Present Value:	Anticipated Spending Needs	\$1,320,473	
	Education Expenses	0	
	Other Expenses	17,500	\$1,337,973
		<hr/>	
	Michelle's Employment	(\$320,321)	
	Social Security Benefits	(222,830)	
	Pension Benefits	(411,751)	
	Other Incomes	(0)	(\$954,902)
		<hr/>	
	Net Estimated Survivor Need Shortage		\$383,071
	Currently Existing Liabilities		172,500
	Assets Available to Offset Shortage		(935,000)
	Current Life Insurance Coverage		(750,000)
	Suggested Additional Life Insurance Coverage		<hr/> <hr/> \$0

Note: Estimated insurance requirements can vary over time due to changes in asset levels, special expenses, education expenses, estate planning, and spousal retirement needs. Additional insurance, held outside of an insurance trust, may have estate tax consequences. It may be prudent to purchase an amount of insurance appropriate to prepare for potential higher coverage needs. Consult with your financial advisor about factors that may suggest additional insurance coverage.

Disability Income Insurance

Disability due to illness or injury can devastate your financial plans. At a time when you are unable to work for a living, household expenses may actually increase while your income decreases. You could be forced to deplete funds that might have been saved for your retirement years.

Generally, the goal of disability income insurance is to replace the after-tax earnings of the insured wage earner and to allow you and your family to maintain your current lifestyle. Based on your current situation, you would need to replace the following income if you were disabled.

Anthony-

Current Income: \$85,000/Yr.

Replacement Ratio*: 65%

Suggested Need: \$55,000/Yr.

Michelle-

Current Income: \$42,000/Yr.

Replacement Ratio*: 65%

Suggested Need: \$27,000/Yr.

* Current underwriting standards allow only a portion of Current Income to be replaced.

In addition, there are many factors which could affect the amount of the Suggested Need noted above. You should review these items before making your final decision. These factors include:

- Investment Income
- Investment Assets
- Retirement Assets
- Spouse's Salary
- Pension Income
- Other Income
- Changes in Living Expenses
- Inflation
- Funds required for retirement/education or other needs
- Length of Time Until Retirement
- Changes in Taxes
- Social Security Disability Benefits
- Employer Disability Benefits

Note: Consult with your financial advisor about factors that may suggest additional insurance coverage.

Long-Term Care

Long-Term Care Defined

Long-term care is sustained medical or custodial care in a hospital, nursing facility, or equivalent care at home. This care meets the needs of people when, for some reason, they cannot care for themselves. Long-term care insurance provides coverage for costs when the need for care extends beyond a pre-determined period. Benefits start when certain conditions and time frames specified by a long-term care insurance policy are met. Generally the needs requirements to obtain insurance benefits fall into two categories:

<p>An inability to perform two or more Activities of Daily Living (or ADLs).</p>	<p>Activities of Daily Living (ADLs) are basic functions of daily independent living and includes:</p> <table style="margin-left: auto; margin-right: auto;"> <tr> <td>Dressing</td> <td>Toileting</td> </tr> <tr> <td>Bathing</td> <td>Transferring</td> </tr> <tr> <td>Eating</td> <td>Continence</td> </tr> </table>	Dressing	Toileting	Bathing	Transferring	Eating	Continence
Dressing	Toileting						
Bathing	Transferring						
Eating	Continence						
<p>Impaired Cognitive Ability</p>	<p>Loss of mental function can result from stroke, dementia or Alzheimer's Disease. Alzheimer's Disease is a disorder that progressively affects one's ability to carry out daily activities.</p>						

The Cost of Waiting to Plan

- 40% of all long-term care recipients are under the age of 65.
- Over 45% of seniors who reach age 65 will spend some time in a nursing home.
- Over 70% of seniors who reach age 65 will need some form of home health care in their lifetime.
- One out of every four families provides care to an elderly relative or loved one.
- 25% will stay in a Nursing Facility for more than one full year.
- The average nursing home stay is 2.5 years and the average Alzheimer's stay is 7 years.

Without benefits from long-term care insurance or a comparable plan, the cost of providing these services could devastate your lifetime savings, or a relative's life savings. On average, one year in a nursing home costs in the area of \$57,000 and can easily exceed \$100,000.

Depending on the care required, most of these expenses are paid for by the patient or their family. Medicare may contribute toward the first 100 days expenses in a skilled care facility. There are no Medicaid benefits available for intermediate-term or custodial care, unless the state finds the patient to be impoverished under local guidelines. Even then, care options would be restricted to care facilities that accept the very limited benefit payments Medicaid offers.

- Medicaid - 38%
- Medicare - 18%
- Private Health Insurance - 6%
- Other - 6%
- Savings / Family - 32%

Medicaid and Medicare Facts

- **Medicaid is a welfare program designed as an emergency safety net to pay health care costs of the poor.**
- **Medicare is part of Social Security, and helps pay for the general health care needs of retired persons.**
- **Medicare typically only pays for doctors, hospitals, and short recuperative stays in nursing facilities.**
- **Private health insurance is designed for medical (doctors, hospitals, etc) not long-term care expenses.**
- **Most people end up relying on their own or relatives resources to pay for long-term care expenses.**

Long-Term Care Need Analysis

Long-term care (LTC) requires long-term planning. LTC insurance is available to cover these expenses, protect your assets, your independence, and control the quality of the care you receive. You are able to choose the specified daily benefit level, as well as the types of medical and care services covered.

When is the best time to purchase LTC insurance? Generally, the premiums stay level once the policy is purchased, much like level term insurance. In practice, the earlier you buy a policy, the lower the premium. Since the odds of becoming disabled increase with age, purchasing coverage before the age of 55 is good planning. Consider the premium cost of several coverage levels to determine which is right for your budget.

Needs Estimate

These estimated long-term care cost examples are based upon your financial information. Consider the numbers here to be a starting point for analysis and discussion of your long-term care insurance needs.

	<u>Anthony</u>	<u>Michelle</u>
Estimated daily care cost	\$200	\$200
Existing LTC daily coverage	\$100	\$100
Net estimated annual care costs	\$36,500	\$36,500
Estimated years of care	5	5
Assumed inflation rate	5%	5%

Current financial assets exposed to potential long-term care expense risk **\$935,000**

Depending on your age, a delay in arranging a Long-term care policy can mean substantially higher premiums. This graph illustrates the cost of waiting to purchase a Long-term care policy.

A Long-term care policy can stabilize and moderate the potentially damaging costs of nursing home care. This graph displays potential cost differential and value of having a Long-term insurance plan in place.

— Total Cost Without Insurance
 — Total Cost With Insurance

This report, and its hypothetical illustrations, are intended to form a basis for further discussion with your legal, accounting, and financial advisors. Actual future investment returns, taxes and inflation are unknown. Do not rely upon this report to predict future investment performance.

Long-Term Care Unprotected Need

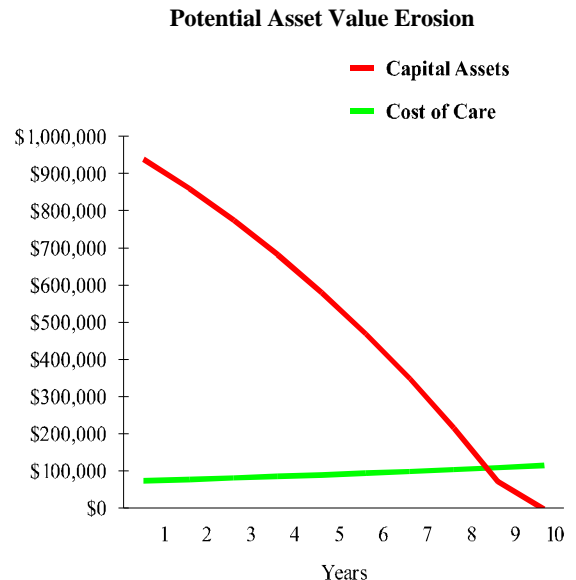

This future long-term care needs chart displays the annual future amount of long-term care needed vs. your assets available. Total Long-Term Care Need is based upon average care requirements. Assets to Liquidate are your non-qualified working assets. Your Unprotected Need is \$228,368 based upon these estimates.

Long-Term Care Need Calculation

Total Long-Term Care Need:	\$403,368 *
Assets to Liquidate:	\$175,000
Unprotected Need:	\$228,368

* Net of existing LTC coverage

Favorable income tax treatment is available for policies meeting certain requirements. In those cases, premiums, with certain limitations, may be deducted as medical expenses for those who itemize their deductions.

Alternative Options to Long-Term Care Insurance

Self-Insurance

This alternative to purchasing LTC insurance is using your existing investments to pay for long-term care if needed. This would be appropriate if sufficient assets are available and the potential loss of those assets to heirs is acceptable. Of course this means that you are willing to liquidate your assets, and if you don't have sufficient funds, you transfer the financial burden to your loved ones. While this alternative may be more flexible, the LTC insurance would be more beneficial if the coverage is eventually needed.

Qualify for Medicaid

Medicaid was enacted to provide health care services for the impoverished. Recent legislation has made it extremely difficult for a person of modest means to qualify for Medicaid benefits by gifting or otherwise disposing of personal assets for less than fair market value.

Summary

Be aware that the potential loss of financial assets to pay for long-term care costs is due to increasing life expectancies and advances in medical treatment for the elderly. This presents a risk to your lifetime savings and financial future. LTC insurance is available at varying levels of coverage and corresponding premiums to meet these risks. LTC insurance can allow you to maintain your desired level of independence and preserve personal assets. However, premium costs will be a significant factor in your decision. Consider discussing your LTC insurance needs and options with an insurance specialist who can explain specific policy details. Fully understanding available options can help you find the best choice for you and your family's future.

Estate Planning

While a very complex topic, estate planning is a critical component of any well developed financial plan. To be effective, this planning needs to be carefully coordinated with the other areas of planning such as Insurance, Retirement, Investments, etc. The primary goal of this section is to highlight estate planning concepts, and help illustrate potential benefits of implementing basic estate planning techniques available today.

Estate Tax

Minimizing estate tax exposure is generally a primary goal of most clients. History is full of examples of estates decimated by unnecessary estate taxes and expenses. We will provide you with an analysis of your current situation and illustrate methods which may help minimize your current and future estate tax exposure. Some of the basic planning techniques we will consider are the use of:

- Unlimited Marital Deduction
- Maximizing use of the Applicable Exclusion Amount
- Unlimited Charitable Deductions
- Annual Gift Exclusion
- Joint Revocable Living Trusts
- Irrevocable Life Insurance Trusts

Other Financial Goals

Other financial goals to consider in your planning are:

- Estate liquidity
- Managing probate, administrative and other expenses
- Minimizing Income Tax

Non-Financial Goals

The non-financial aspects of estate planning are just as important as the various financial goals described above. They will often be of a very personal nature and should be customized to fit into your overall plan. Generally, this can be accomplished by discussing these goals noted above. We will be able to point out only general concepts in this report. However, some of the nonfinancial goals for you to consider are:

- Caring for dependents or minor children
- Distribution of property to heirs
- Maintaining control over assets
- Lifetime planning issues such as incapacity and health care powers

Summary

Protecting your estate requires careful planning. The diverse skills required to coordinate a plan might require a team approach consisting of your financial planner, attorney, insurance specialist, accountant and investment advisor. The illustrations provided here are intended as tools to help you and your team make informed decisions. In addition, your situation will most likely change with time. Therefore, you will need to monitor your estate planning situation periodically and make amendments as required.

This report is a hypothetical illustration and does not constitute legal or tax advice. You should always obtain legal counsel and professional tax advice before taking action affecting your estate planning.

Your Current Situation

The illustrations in this report are based on information that you provided. Before reviewing the estate illustrations or investigating any of the alternatives that follow, please verify the following data and assumptions for accuracy and completeness.

Basic Data

	<u>Anthony</u>	<u>Michelle</u>
Age	58	54
Age at Death for this Illustration	58	54

Your Alternate Estate Planning Structure

Summary of Alternative Estate Results

This report reviews and compares the cumulative impact of some potential estate planning alternatives upon your estate. The Alternative Flowchart diagram which follows this page helps illustrate how the improved estate structure reduces the amount of your estate exposed to estate taxes. In your specific case, you may be able to reduce your estate costs and taxes by up to 81%. These savings directly translate into additional assets available for beneficiaries.

Currently, your combined total estate is estimated to be \$2,508,500. Using estimated estate settlement costs of \$148,790, you would pass approximately \$2,359,710 to your beneficiaries.

With proper implementation of potential alternative estate structures, your current estimated estate settlement costs may be reduced to approximately \$27,648. This would allow you to save \$121,142 in taxes and expenses, transferring \$2,480,852 to your beneficiaries.

Alternative Wills and Trusts

By implementing potential alternative estate strategies, you may significantly increase the assets passing to your beneficiaries at death and reduce your estimated estate settlement costs.

Your current estate documents:

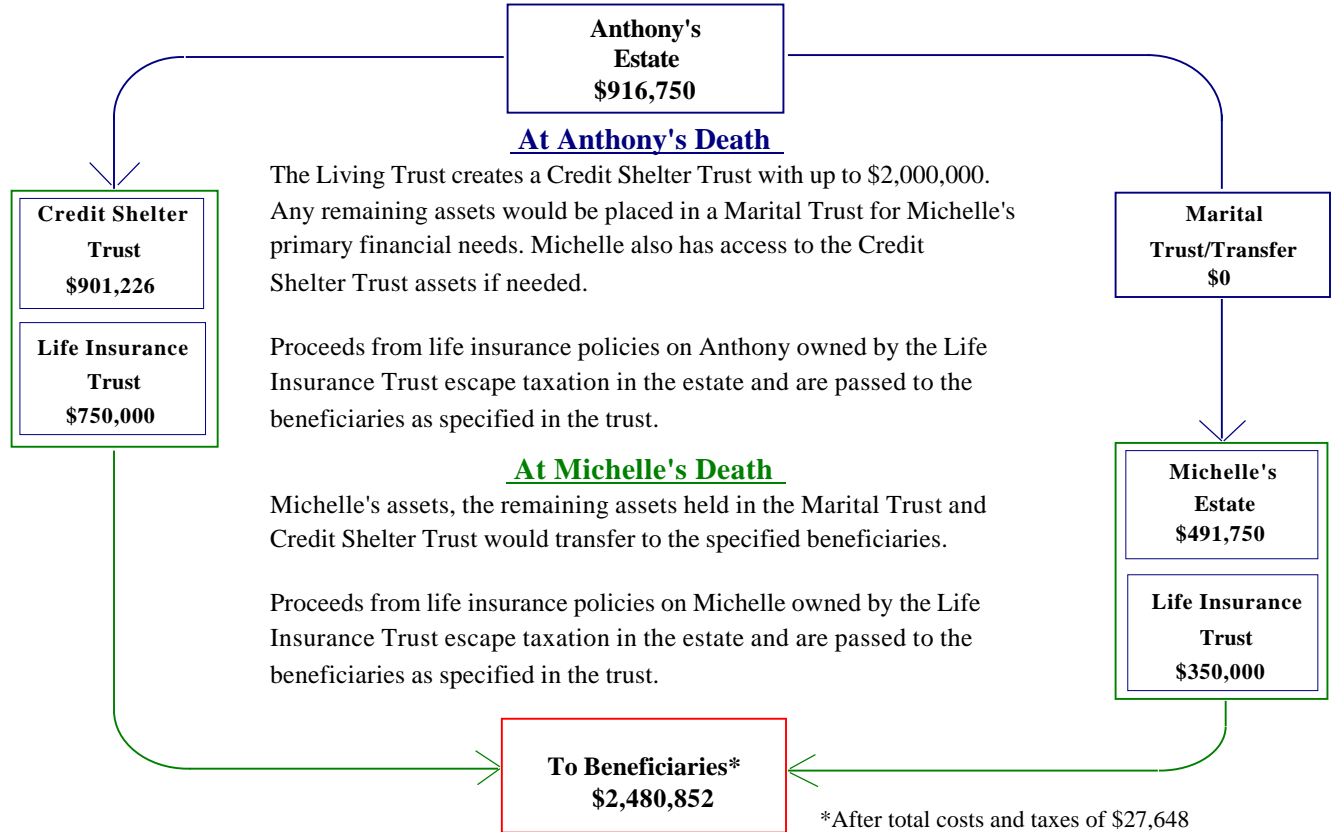

- A Will for each spouse
- Revocable Living Trusts for each spouse
- Credit Shelter Trust provisions
- Marital Trust provisions
- Durable General Powers of Attorney
- Durable Health Care Powers of Attorney
- Living Wills

Suggested additional/alternative estate documents:

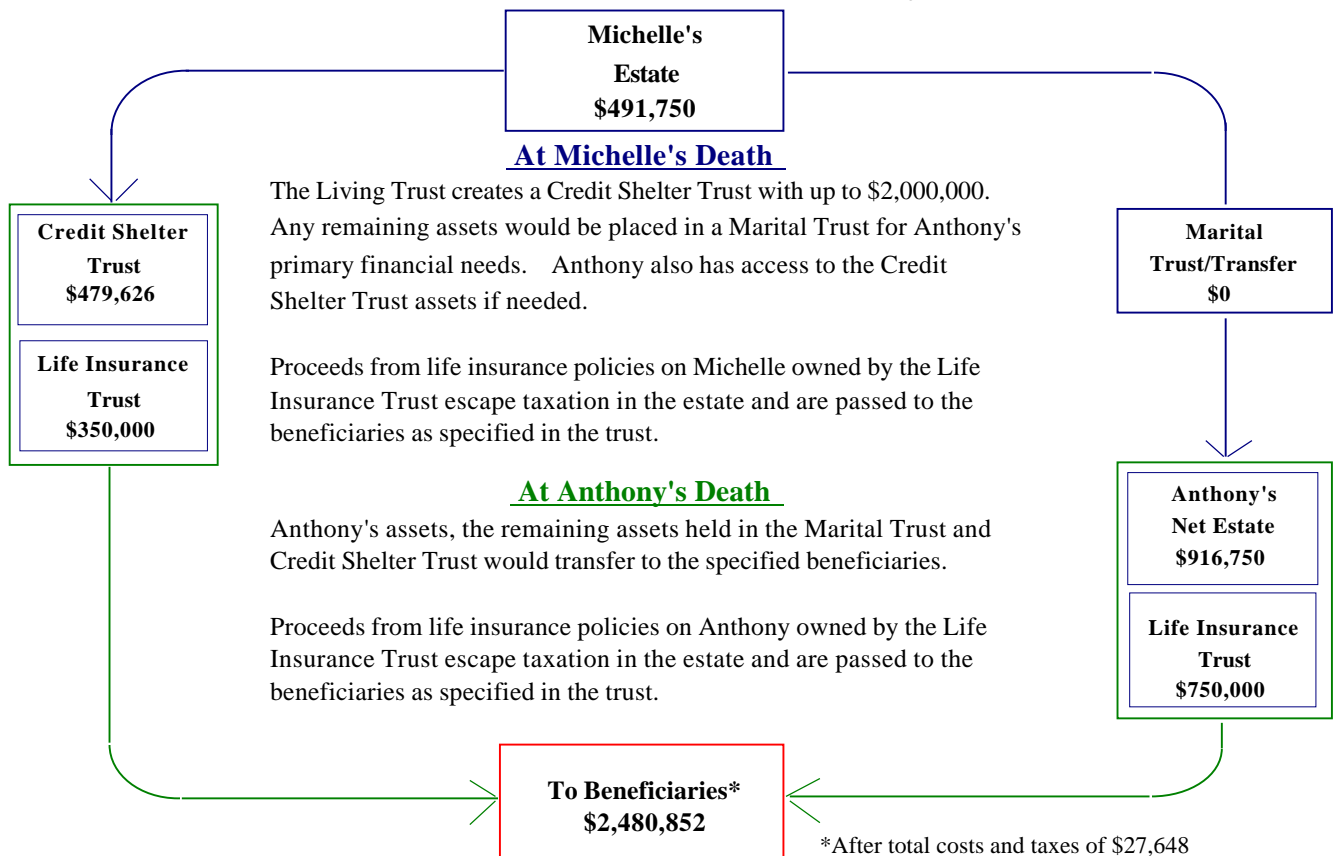

- A revised Will for each spouse if necessary
- Revised asset ownership to balance property if necessary
- A Joint Revocable Living Trust
- Fund the Joint Revocable Living Trust if necessary
- Revised Credit Shelter Trust provisions
- Revised Marital Trust provisions
- Irrevocable Life Insurance Trusts

Estate Tax Estimate

EGTRRA 2001

In June 2001, The Economic Growth and Tax Relief Reconciliation Act of 2001 was signed into law. One feature of the new law is to completely phase out estate taxes by 2010. This will be done by increasing estate tax exemptions and decreasing estate tax rates each year. In 2010, inherited property will no longer receive a step-up in basis as is done now, exposing those assets to potentially large capital gains when sold. In addition, Gift Tax rules have been changed. Congress must decide by 2011 if these changes will be permanent or revert back to previous law. We have shown your estate tax exposure in 2011 in terms of the previous law.

An Estimate of Your Estate Tax Exposure Using Suggested Planning

We have taken information provided about your current estate net worth to estimate your estate tax exposure under the new law over the next several years. We make some general assumptions regarding the growth of assets. Also, as previously suggested in this analysis, we assume that each individual has funded a credit shelter trust utilizing the applicable exclusion amounts available to them (currently \$2,000,000 per person in 2006). We also assume that any life insurance benefits are kept out of the taxable estate. The graph below shows your estimated estate tax exposure (red) and your estate remainder after taxes (green) at each year end. Keep in mind that the status of estate tax law is uncertain beyond year 2010.

Estimated Estate Growth vs. Federal Estate Tax

Year End	Retirement Capital	Other Assets	Debts & Expenses	Adjustments*	Estate Tax Base	Exclusion Amounts	Estimated Estate Tax
2006	\$1,027,930	\$1,746,000	(\$214,001)	\$0	\$2,559,929	\$4,000,000	\$0
2007	1,127,653	1,765,380	(215,777)	0	2,677,255	4,000,000	0
2008	1,234,635	1,785,341	(217,669)	0	2,802,308	4,000,000	0
2009	1,349,378	1,805,902	(212,052)	0	2,943,227	7,000,000	0
2010	1,472,411	1,827,079	(237,829)	0	3,061,661	0	0
2011	1,604,303	1,848,891	(232,113)	0	3,221,081	2,000,000	(536,697)
2012	1,745,662	1,871,358	(234,546)	0	3,382,474	2,000,000	(610,938)
2013	1,886,374	1,894,499	(236,956)	0	3,543,917	2,000,000	(700,202)
2014	2,036,437	1,918,333	(239,510)	0	3,715,260	2,000,000	(779,020)
2015	2,196,487	1,942,883	(242,217)	0	3,897,153	2,000,000	(862,690)

*Adjustments include charitable deductions or previous taxable gifts that have been included in your estate plan analysis.
